

Press Release – Healthcare BU - New ISO 7 certified clean room

FaiveleyTech inaugurates a brand-new ISO 7 certified clean room

5th July 2023

The FaiveleyTech Annecy site has announced the start-up of a new clean room dedicated to additional assembly operations. This installation will further bolster the FaiveleyTech Healthcare BU capacity in the markets of medical appliances, diagnostics, pharmaceutical packaging and administration of medication.

A new ISO 7 certified clean room covering 100 m² for increased operational capacity

Fuelled by its constant growth, the FaiveleyTech Healthcare BU is investing in an additional tool and production capability in harmony with the exacting requirements of its clients as well as market developments.

The group is further bolstering its production capability with the installation of a brand-new ISO 7 certified clean room covering 100 m² at its Annecy site. It has just completed the three ISO 7 clean room injection workshops covering a total of 1,700 m² (800 m², 600 m² and 300 m²), the two assembly units in the anteroom and the integrated microbiological laboratory. **This new clean room will play host to its first projects during summer 2023.**

FaiveleyTech is bolstering its assembly capacity in an ISO 7 certified clean room, in addition to its injection activities (also in an ISO 7 certified clean room).

"Thanks to this new infrastructure, FaiveleyTech is offering the healthcare market a complete product range including additional injection operations in an ISO 7 certified clean room. This approach, which is particularly for the sectors of medical appliances, diagnostics, pharmaceutical packaging and administration of medication, offers genuine added value", stated Lionel Frutoso, Director of the Healthcare BU.

FaiveleyTech Anancy: a key site for the Healthcare Business Unit

The FaiveleyTech Healthcare BU is focused around three strategic business areas: **pharma** (administration of medication and pharmaceutical packaging), **diagnostics** and **medical appliances**.

The **FaiveleyTech Anancy** site (formerly Eudica) is focused on **pharma** and **diagnostics**, with specialisation in industrialisation, advanced process automation, high-level infrastructure and production in a controlled atmosphere.

It offers the pharmaceutical sector increased responsiveness and flexibility. Its infrastructure is conducive to the manufacture of large volumes at high speed, with effective automation perfectly suited to the high level of requirements.

The **FaiveleyTech Ticino** site (formerly Socoplast), located in Switzerland, works alongside this site and has based its expertise around **medical appliances**. Fitted with an ISO 8 certified clean room, it provides clients with capabilities for prototyping, design support and product trials. Advanced expertise in micro-injection, assembly, welding and completion is particularly relevant in the production of small- and medium-sized series.

FaiveleyTech constantly invests in its production sites and is a multi-faceted and flexible partner for companies operating in the healthcare sector. The combination of its product expertise (administration of medication, pharmaceutical packaging, diagnostics, medical appliances), and technical expertise (production in a controlled atmosphere, industrialisation, high-speed process automation, advanced expertise in requirements, assembly solutions, micro-injection) make it a key player in the Healthcare industry.

| About FaiveleyTech

FaiveleyTech is an international group, founded in France, and specialising in plastic injection with high added value for exacting, selective and/or regulated markets in the Industry, Beauty and Healthcare sectors. It is managed by CEO Nicolas Alloin and the Faiveley Family, who is shareholder of Faiveley Transport-Wabtec, global leader in railway equipment, and has owned the Domaine Faiveley (Nuit-Saint-Georges) wine growing estate in Burgundy since 1825.
